Great talking with you today, Alayna!

As promised below is the link to the videos on the City of Greenville's Unity Park website.

First, please look at the images below.

Unity Park is immediately downriver from the Bramlette MGP which is still discharging hazardous substances in the form of cPAHs and other CoCs.

Duke has done extensive RI work on the area between the MGP and Unity Park, under a VCC reopened on the site in 2016.

I also attached my data comparison of what they removed with a partial remediation of the MGP site in 2001-2003, to what is in Lake Conestee, 7 miles downstream.

Duke hauled away and did thermal treatment 34,000 tons of PAH soils. Within the volume there is 91 times that mass, at 12 times the concentration of their cleanup level (cPAHs>319ug/kg).

Of course Duke now says, they didn't release those PAHs to the river/LC, that it must have been those poor minority folks in the Southernside EJ neighborhood.

And true to form Duke has donated \$500K to the new park..... isn't that nice.

<https://unityparkgreenville.com/1843/Unity-Park>

Go to the video gallery - there are several videos showing reshaping of the river channel and removal of historical floodplain & floodway sediments.

I'm trying to figure out what went where..... you can bet that huge masses of PAHs were liberated downstream, with the re-sculpting of the channel,,,,, and are now in LC.

Let me know if you have questions.

Thanks so much.

Dave
